

1. Total Volume Penjualan (Total Quantity Sold)

- **Deskripsi:** Menunjukkan jumlah total unit produk (alat berat/kendaraan) yang terjual selama periode analisis untuk melihat skala volume transaksi.
- **Formula SQL:**

```
SELECT SUM(kuantitas) as total_volume_penjualan  
FROM fact_penjualan;
```

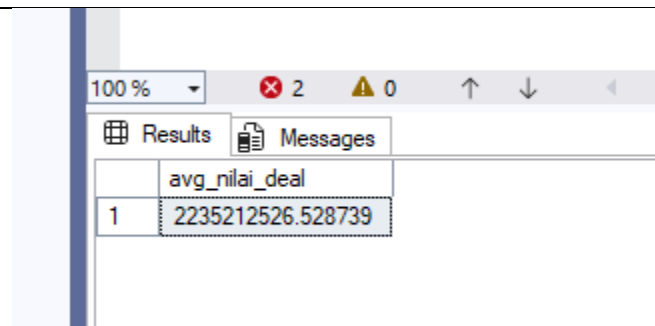

The screenshot shows a SQL Server query results window. The top bar indicates 100% zoom, 2 errors, and 0 warnings. The 'Results' tab is active, displaying a single column named 'total_volume_penjualan'. The first row shows the value 7932.

	total_volume_penjualan
1	7932

2. Rata-Rata Nilai Deal (Average Deal Value)

- **Deskripsi:** Nilai rata-rata potensi kontrak atau penawaran harga dari setiap transaksi yang masuk ke sistem.
- **Formula SQL:**

```
SELECT AVG(total_nilai_deal_idr) as avg_nilai_deal  
FROM fact_penjualan;
```

The screenshot shows a SQL Server query results window. The top bar indicates 100% zoom, 2 errors, and 0 warnings. The 'Results' tab is active, displaying a single column named 'avg_nilai_deal'. The first row shows the value 2235212526.528739.

	avg_nilai_deal
1	2235212526.528739

3. Total Pendapatan Riil (Total Realized Revenue)

- **Deskripsi:** Akumulasi total uang yang benar-benar masuk (revenue riil) hanya dari transaksi dengan status berhasil (*won*).
- **Formula SQL:**

```
SELECT AVG(total_nilai_deal_idr) as avg_nilai_deal
```

```
SELECT SUM(revenue_idr) as total_revenue_riil  
FROM fact_penjualan  
WHERE status_transaksi = 'won (berhasil)';
```

	total_revenue_rnil
1	3968071479614.00

4. Rata-Rata Pertumbuhan Bulanan Revenue (Average MoM Revenue Growth)

- **Deskripsi:** Mengukur rata-rata persentase pertumbuhan pendapatan perusahaan per bulan berdasarkan tabel waktu.
- **Formula SQL:**

```

SELECT AVG(mom_growth) as avg_monthly_growth
FROM (
  SELECT
    w.tahun,
    w.bulan,
    (SUM(f.revenue_idr) - LAG(SUM(f.revenue_idr)) OVER (ORDER BY w.tahun, w.bulan))
    / NULLIF(LAG(SUM(f.revenue_idr)) OVER (ORDER BY w.tahun, w.bulan), 0) * 100 as
mom_growth
  FROM fact_penjualan f
  JOIN dim_waktu w ON f.id_waktu = w.id_waktu
  WHERE f.status_transaksi = 'won (berhasil)'
  AND w.tahun < 2024 -- Tambahan filter untuk membuang data 2024
  GROUP BY w.tahun, w.bulan
) as sub;

```

	avg_monthly_growth
1	1.955840

5. Nilai Transaksi Tertinggi (Max Deal Value)

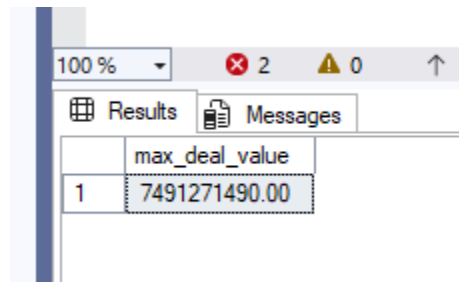

- **Deskripsi:** Mencatat rekor nominal transaksi terbesar dari satu *order* tunggal yang pernah dicapai perusahaan.
- **Formula SQL:**

```

SELECT MAX(total_nilai_deal_idr) as max_deal_value

```

FROM fact_penjualan;

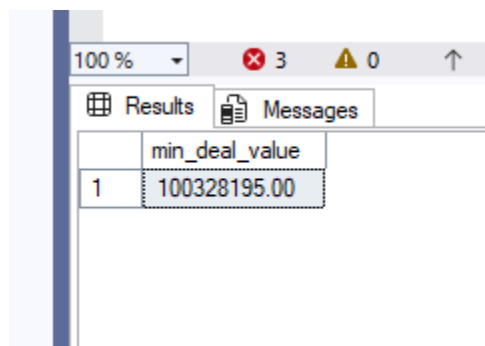

The screenshot shows the SQL Server Enterprise Manager interface. The 'Results' pane displays a single row of data. The column is labeled 'max_deal_value' and the value is 7491271490.00. The interface includes a toolbar with a zoom dropdown set to 100%, a status bar showing 2 errors and 0 warnings, and tabs for 'Results' and 'Messages'.

	max_deal_value
1	7491271490.00

6. Nilai Transaksi Terendah yang Valid (Min Deal Value)

- **Deskripsi:** Batas bawah nilai transaksi bersih setelah anomali Rp 0 dibersihkan dari sistem.
- **Formula SQL:**

```
SELECT MIN(total_nilai_deal_idr) as min_deal_value  
FROM fact_penjualan  
WHERE total_nilai_deal_idr > 0;
```

The screenshot shows the SQL Server Enterprise Manager interface. The 'Results' pane displays a single row of data. The column is labeled 'min_deal_value' and the value is 100328195.00. The interface includes a toolbar with a zoom dropdown set to 100%, a status bar showing 3 errors and 0 warnings, and tabs for 'Results' and 'Messages'.

	min_deal_value
1	100328195.00
